At McGraw-Hill, we have spent thousands of hours with you and your students, working to understand the key needs and concerns you face in the Human Development course. The most common topics raised include managing the vast amount of content inherent to a Lifespan course and ensuring the dependability of the assigned material – is it current and accurate? This updated edition aims to teach students how to observe, record and evaluate the social, motor and cognitive development of children from infancy to eight years of age. aides.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—*which includes all primary caregivers*—are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8: universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Written by the author of highly effective psychology texts relied upon by thousands of teachers and students, Educational Psychology is a well-crafted text that emphasizes the application of theory to classroom practice. With richly evocative classroom vignettes provided by practicing teachers, as well as the most case studies - three per chapter - of any Introductory text, Santrock's Educational Psychology helps students think critically about the research basis for best practices. Additionally, Santrock's hallmark Learning System organizes the content into manageable chunks to support retention and mastery, and make it much more likely that students will have an engaging and successful course experience.

Counseling Across the Lifespan by Cindy L. Juntunen and Jonathan P. Schwartz is a practical book that helps readers provide effective mental, emotional, and behavioral health services to clients across the continuum of care, from health promotion through long-term treatment and remediation. Anchoring each chapter within a life stage—from childhood through older adulthood—the text identifies the nature and origin of various psychological issues and emphasizes the importance of anticipating and responding early to concerns that arise for large portions of the population. The Second Edition features new chapters and expanded coverage of important topics, such as sociocultural contextual factors and interprofessional health perspectives.

Recently the lives of people from age 18 to 29 have changed so dramatically that a new stage of life has developed, emerging adulthood, that is distinct from both the adolescence that precedes it and the young adulthood that comes in its wake. Rather than marrying and becoming parents in their early twenties, most people in industrialized societies now postpone these transitions until at least their late twenties, and instead spend the time in self-focused exploration as they try out different possibilities in their careers and relationships. In Emerging Adulthood, Jeffrey Jensen Arnett identifies and labels, for the first time, this period exploration, instability, possibility, self-focus, and a sustained sense of being in limbo. An increasing number of emerging adults emphasize having meaningful and satisfying work to a degree not seen in prior generations. Marrying later and exploring more casual sexual relationships have created different hopes and fears concerning long-term commitments and the differences between love and sex. Emerging adults also face the challenge of defending their non-traditional lifestyles to parents and others outside their generation who have made much more traditional choices. In contrast to previous portrayals of emerging adults, Arnett's research shows that they are particularly skilled at maintaining contradictory emotions--they are confident while still being wary, and optimistic in the face of large degrees of uncertainty. As the demographics of American youth, the American workplace, and adulthood continue to evolve, Emerging Adulthood is indispensable reading for anyone wanting to understand the face of modern America.

Ego Identity: A Handbook for Psychosocial Research contains an integrated presentation of identity theory, literature reviews covering the hundreds of research studies on identity, a discussion of the techniques of interviewing for psychosocial constructs, and model Identity Status Interviews and scoring manuals for three age groups: early- and middle- adolescence, the college years and adulthood. Special attention is devoted to questions of the personality and social patterns associated with differing approaches to the task of identity formation, the processes and patterns of identity development, and the similarities and differences with which females and males form their sense of identity. Theory and research on Erikson's concept of intimacy is presented, including the Intimacy Status Interview and scoring manual. This handbook is also

designed to serve as a model for those interested in developing and using interview techniques for any of the other Eriksonian stages of psychosocial development. This book is ideal for researchers of ego identity and intimacy, practitioners and graduate students in developmental, personality, and social psychology as well as to psychiatrists.

The Ninth Edition of PERSONALITY THEORIES continues to provide thorough coverage enhanced with helpful learning aids, opportunities for honing critical thinking skills, and integration of multicultural and gender-related issues. Each chapter focuses on one theory or group of theories and includes brief biographies that shed light on how the theories were formed. The author also provides criteria for evaluating each theory and cites current relevant research. A final chapter on Zen Buddhism covers a major non-Western theory of personality and serves to distinguish this program in the field. Balanced coverage of the entire life span is just one thing that distinguishes HUMAN DEVELOPMENT: A LIFE-SPAN VIEW, Seventh Edition.
